PROFILE

Computer Science graduate (2:1) from the University of Plymouth with hands-on experience delivering a full-stack mobile application with machine learning, a responsive website for a real client, and real-time 3D graphics projects. Strong foundation in JavaScript, HTML and CSS, with experience in TypeScript, React Native and Python. I work independently from concept through to deployment, and I care about clean code and user-friendly design.

Seeking a graduate or junior developer role (front-end, full-stack or software engineering), remote, hybrid or in Plymouth.

TECHNICAL SKILLS

Frontend	HTML, CSS, JavaScript, TypeScript, React Native, Expo, responsive design
Backend & data	Python, FastAPI, REST APIs, Pydantic, SQLAlchemy, pytest
Machine learning	PyTorch, scikit-learn, NumPy, pandas
Graphics & games	Godot, C++, OpenGL / GLSL, C#, Unity, VR
Tools & practice	Git, GitHub, VS Code, debugging, Agile / iterative development, software development lifecycle

PROJECTS

ScreenSense: personalised digital wellbeing app

Final-year project · First

TypeScript, React Native / Expo, Python, FastAPI, PyTorch, scikit-learn · Case study · GitHub

- Built a full-stack mobile app that helps students manage screen time with mood check-ins, journaling and personalised suggestions
- Developed a layered FastAPI backend with Pydantic validation, database access, Swagger documentation and pytest tests
- Trained and integrated explainable ML (Random Forest stress model: 79.8% held-out F1, κ 0.679; LSTM mood trends; BiLSTM journal analysis) with SHAP and conformal prediction
- Wrote 37 passing pytest tests and ran usability testing with 3 users, using their feedback to improve the flow and wording
- Recovered from mid-project data loss by re-prioritising and rebuilding the core system, then delivered on time

Flip Shop: 3D shop-sim game, published on itch.io

Godot

- Made and released a first-person junk-restoration shop sim with scrapyard trips, hands-on restoration, build mode, staff, 19 achievements, controller support and accessibility options · itch.io

Responsive website: client project for a driving instructor

HTML, CSS, JavaScript

- Designed and built a fully responsive website that works well across mobile, tablet and desktop
- Managed the project from planning through to deployment, and delivered a final product that met the client's requirements

TON 618: Stellar Expedition: real-time graphics

C++, OpenGL, GLSL

- Built an interactive OpenGL scene with HDR bloom, shadow mapping, instanced particles and physically based shading, plus a playable gameplay loop

Task Manager: web app

HTML, CSS, JavaScript

- Created a browser-based task manager with due dates, priorities, category search and a calendar view · [Live demo](#)
- Also built: **Rune Breaker** (C arcade game) and **Space Explorer** (procedural OpenGL)

EDUCATION

BSc (Hons) Computer Science: Second Class Honours, Upper Division (2:1)

2022 – June 2026

University of Plymouth (including foundation year)

Modules: Computing Project (First), Games Graphics Pipelines (First), Product Development & Delivery, Software Engineering, Algorithms & Data Structures, AI, Group Project.

EXPERIENCE

Volunteer VR Developer, rehabilitation research project

Feb 2026 – Jun 2026

- Built MotionVR in Unity at a health researcher's request: a VR prototype for vestibular rehabilitation that pairs head movements with phase-advanced visual motion
- Delivered the full 5-day session protocol, session management, motion sickness scoring and CSV data logging, then supported the team remotely with hardware setup (Quest 2 via Link)

Volunteer, Habitat for Humanity, Cincinnati, USA

Jan 2022 – Mar 2022

- Supported community events, assisted visitors and maintained displays in a customer-facing role, building teamwork and communication skills
